Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3635

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 41-68 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

claim 41-47 and 52-68

The text, "...and further having a portion defining a pliant, the releasable aperture comprising..." on the third and fourth line of claim 63 has no clear meaning.

The restraining and support members lack a proper antecedent basis in the specification. Though one is able to glean what is intended, the text used in the specification should be consistent with that in the claims. Indeed it is very unclear as to which elements make up the restraining member and which make up the support member(s) and how the two distinct one from another.

For claims 48-51:

it is very unclear what is being claimed the combination of the tent/adapter or just the subcombination of the adapter

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3635

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 48 and 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Royal (2658439).

Royal discloses an adapter comprising

1. A flange having a front and a back; see annotations on patent copy
2. A boot having first and second ends defining a longitudinal aperture extending therebetween
3. The boot is affixed at its first end approx perpendicularly to the flange; the criticality and significance has not been shown; it is important to have the boot firmly attached to the flange as shown by Royal
4. The boot is capable of attaching to a tent with a window.
5. The boot is made of a flexible material thus could be constructed of any flexible material such as polymer, vinyl, nylon cotton, leather and combinations thereof; the selection of material has been considered a matter of choice; one of ordinary skill in the art would have appreciated making the adapter of any suitable material enabling the intended function of the device.

. Claims 49-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Royal (2658439) in view of Bishop.

Bishop discloses a tent adapter having a flange 39 having a front and a back; a portion which is securable to a tent; a boot 33 having first and second ends defining a

Art Unit: 3635

longitudinally extending aperture there between; the bottom 33 is affixable at the first end perpendicularly to the flange 39 affixing a climate control unit to the tent; the second end 35/37 of the boot includes an elastic edge /restraining member; see column 2, lines 1-32; the second end has a closure/restraining member for closing the aperture at the second end; the support member 33 is made adjustable by the elastic/drawstring at the second, holding the climate control unit at a predetermined distance in relation to the dwelling.

In view of the above, it would have been obvious to one of ordinary skill in the art to modify Royal to include the elastic edge to conform the adapter around the units G/4/5/K.

The indication of allowable subject matter for claims 41-47 and 52-68 is being held in abeyance until amendments to the specification/claims has been made.

All arguments are moot in view of the new ground of rejection.
